OIT 152-87
26 March 1987

MEMORANDUM FOR: Deputy Director for Administration

FROM: Edward J. Maloney
Director of Information Technology

SUBJECT: Weekly Report for Week Ending 27 March 1987

1. The Cable Dissemination System (CDS), which processes all incoming and outgoing messages, again experienced several failures during this reporting period. The longest outage (five hours) occurred on 17 March, creating a ripple effect which caused a backlog of approximately 13,000 routine and priority messages by the afternoon of 20 March. There were no significant delays in processing higher-precedence traffic. CDS functioned normally over the past weekend and backlog of messages was eliminated.
